Plumbing nuisances abated	52
Undergoing abatement	28
Total number plumbing inspections	148

Plague deaths at San Francisco, bacteriologically confirmed.

[Telegram.]

SAN FRANCISCO, CAL., September 14, 1903.

WYMAN, Washington:

Diagnosis bacteriologically confirmed in cases 100 and 101.

BLUE.

NOTE.—These deaths occurred August 9 and August 21, respectively.

Yellow fever on steamship Colon at San Francisco quarantine.

[Telegram.]

ANGEL ISLAND, CAL., September 11, 1903.

WYMAN, Washington:

Steamship *Colon* arrived yesterday evening with 1 case yellow fever on board moribund. Seven days sick. Case removed to hospital. Vessel disinfected. Passengers at station.

CUMMING.

NOTE.—The *Colon* plies between Panama and San Francisco and sailed from Acapulco September 1.

Dengue reported at Fort Jefferson, Dry Tortugas, Fla.

[Telegram.]

KEY WEST, FLA., September 12, 1903.

WYMAN, Washington:

Dengue reported at Fort Jefferson, Dry Tortugas. Returned from Habana to-night and go through to Miami, returning here Sunday.

PORTER.

Inspection service, Mexican border.

El Paso, Tex.—Acting Assisting Surgeon Alexander reports, September 5, 1903, as follows: Week ended September 5, 1903. Mexican Central passengers inspected, 206; Rio Grande and Pacific passengers inspected, 23; Mexican immigrants inspected, 108; special inspection of Syrian immigrants, 3; soiled linen imported for laundry, inspected; special inspection of travelers from Vera Cruz, Mexico, 2; disinfection of soiled linen imported for laundry, 522 pieces; disinfection of baggage of passengers from Vera Cruz; detention of 2 passengers from Vera Cruz for two days.

Laredo, Tex.—Acting Assistant Surgeon Hamilton reports, August 30, 1903, as follows:

Week ended August 29, 1903. Number of passenger trains entering from Mexico inspected, 14; persons on passenger trains entering from Mexico inspected, 575; immigrants inspected, 48; immigrants vaccinated upon entry, 4; 1 person three days out from Vera Cruz refused entry; 22 persons from eight to twelve hours out from Monterey detained; supervised disinfection of 7 Pullman sleeping cars.

Quarantine station established by Mexican authorities on the Mexican National Railroad—Detention of passengers.

LAREDO, TEX., September 5, 1903.

SIR: I have the honor to inform the bureau that a quarantine station has been established 12 miles from the border on the Mexican

National Railroad by the Mexican authorities for the purpose of detaining for five days (complete) all persons from Monterey, Mexico, or any place infected with yellow fever. There are no habitations near said station and the railroad company have placed two passenger coaches on switch for accommodation of persons detained. They also have several tents. This has simplified the quarantine situation here considerably.

Since the establishment of said station only one person has passed that station—that is, he escaped. We were immediately notified and he was in Laredo only a few hours when found and returned to the Mexican authorities. The through Mexico train (passenger) does not stop between Saltillo and Lampazos, 68 miles south of Monterey and 95 miles north of Monterey, either going north or south. Persons boarding train at Saltillo have United States consular certificates as evidence of having been there five or more days. Freight-train crews from Nuevo Laredo, Mexico, do not run to Monterey, but receive their trains at a station this (north) side of Monterey.

State Health Officer G. R. Tabor, after visiting Monterey, thought it advisable to continue quarantine. He informed me he would send an inspector there. I have not learned of any yellow-fever cases originating in Monterey, Mexico.

Respectfully,

H. J. HAMILTON,
Acting Assistant Surgeon.

[Telegrams.]

Detention and disinfection of mail from Monterey.

LAREDO, TEX., September 13, 1903.

WYMAN, Washington:

Texas inspector at Monterey reports ten days' detention and disinfection of mail from Monterey.

HAMILTON.

Yellow fever at Monterey—Detention and disinfection of mail.

LAREDO, TEX., September 13, 1903.

WYMAN, Washington:

Texas inspector at Monterey reports yellow fever now present in Monterey. Texas now requires ten days' detention and disinfection of mail from Monterey.

HAMILTON.

Yellow fever at Nuevo Laredo, Mexico.

AUSTIN, TEX., September 15, 1903.

WYMAN, Washington:

One case yellow fever officially reported, after necropsy, at Nuevo Laredo, Mexico. I go there to-night to personally conduct quarantine, which will prohibit all communication with Mexico.

TABOR, State Health Officer.

Epidemic dengue reported at Nuevo Laredo, suspect yellow fever.

LAREDO, TEX., *September 15, 1903.*

WYMAN, *Washington:*

The local authorities report epidemic dengue, Nuevo Laredo, Mexico. Physician died yesterday with black vomit; sick five days. Had jaundice. Necropsy to-day. Present, State quarantine officer, U. S. Army surgeon, the health officer of Laredo, the local board of health, self. Diagnosis, suspicious yellow fever; another person urine contains albumin and bile; another urine contains albumin, both jaundice. Is very suspicious; have quarantined. State health officer and chief U. S. Army surgeon Department of Texas, will be here to-morrow. Think the disease was introduced by person from Victoria, Mexico. Shall have a consultation and will advise you of result.

HAMILTON.

Precautions against importation of yellow fever—Camp equipment.

WASHINGTON, *September 16, 1903.*

HAMILTON, *Laredo, Tex.:*

Have wired State health officer that you will cooperate. Will order sent you by freight to-day tentage and camp equipage for 100 people. This simply by way of anticipation. Service officers also will be ordered as preventive against emergency, but you will retain your present duties if they come.

WYMAN.

WASHINGTON, *September 16, 1903.*

HUME, *Eagle Pass, Tex.:*

Have wired State health officer you will cooperate with him. Wire requisition for any additional equipment or help needed.

WYMAN.

Statistical reports of States and cities of the United States—Yearly and monthly.

CALIFORNIA—*Fresno.*—Month of August, 1903. Estimated population, 18,000. Total number of deaths, 23, including 1 from enteric fever.

Los Angeles.—Month of August, 1903. Estimated population, 135,000. Total number of deaths, 214, including diphtheria 3, enteric fever 5, measles 1, whooping cough 2, and 38 from tuberculosis.

Stockton.—Month of April, 1903. Estimated population, 28,000. Total number of deaths, 23, including enteric fever 1, and 11 from tuberculosis.

FLORIDA—*Tampa.*—Month of August, 1903. Estimated population, 20,000. Total number of deaths, 15, including 4 from tuberculosis.

GEORGIA—*Augusta*.—Month of August, 1903. Estimated population, 42,441. Total number of deaths 59, including enteric fever 4, whooping cough 1, and 1 from tuberculosis.

Columbus.—Month of August, 1903. Estimated population, 19,303—white, 10,276; colored, 9,027. Total number of deaths, 34—white, 13; colored, 20—including whooping cough 1, and 2 from phthisis pulmonalis.

Macon.—Month of August, 1903. Estimated population, 28,000—white, 15,000; colored, 13,000. Total number of deaths, 24—white, 9; colored, 15—including enteric fever 1, and 2 from phthisis pulmonalis.

ILLINOIS—*Peoria*.—Month of August, 1903. Census population, 56,100. Total number of deaths, 71, including diphtheria 2 and 5 from tuberculosis.

Rockford.—Month of August, 1903. Estimated population, 40,000. Total number of deaths, 29, including 1 from enteric fever.

MASSACHUSETTS—*Newton*.—Month of August, 1903. Estimated population, 37,794. Total number of deaths, 33, including diphtheria 1, enteric fever 1, whooping cough 2, and 1 from tuberculosis.

FOREIGN AND INSULAR.

AUSTRALIA.

Report from Sydney, New South Wales—Plague—Bacteriological examination of rats for plague.

Consul-General Barton, at Melbourne, forwards the following under date of August 7:

SYDNEY, July 3, 1903.

Plague Bulletin No. 4, 1903.

Week ending 1 p. m. on Saturday, July 11, 1903: Rats examined in laboratory, 552; found infected, 0. Mice examined in laboratory, 419; found infected, 2.

Plague.—Week ending June 20, 1903, 1 case, 0 deaths; week ending June 27, 1903, 0 cases, 0 deaths; week ending July 4, 1903, 0 cases, 0 deaths; week ending on Saturday, July 11, 1903, 1 case, 0 deaths.

SYDNEY, July 20, 1903.

Plague Bulletin No. 5, 1903.

Week ending 1 p. m. on Saturday, July 18, 1903: Rats examined in laboratory, 496; found infected, 3. Mice examined in laboratory, 440; found infected, 12.

Plague.—Week ending 1 p. m. on Saturday, July 18, 1903: 0 cases, 0 deaths.

SYDNEY, July 27, 1903.

Plague Bulletin No. 6, 1903.

Week ending 1 p. m. on Saturday, July 25, 1903: Rats examined in laboratory, 425; found infected, 0. Mice examined in laboratory, 531; found infected, 1.

Plague.—Week ending 1 p. m. on Saturday, July 25, 1903: 0 cases, 0 deaths.

By order.

G. H. KING, *Secretary.*

BRAZIL.

Reports from Bahia—Mortuary statistics.

Vice-Consul Rowe reports, August 17, as follows: During the week ended August 15, 1903, 86 bodies were interred in the Bahia cemeteries.

The causes given for interment were the following: Apoplexy, 2; aneurism, 1; arterio-sclerosis, 2; beriberi, 2; bronchitis, 7; cancer, 1; cerebral congestion, 1; cirrhosis of liver, 1; diarrhea, 4; diarrhea and enteritis, 3; hepatitis, 2; influenza, 1; leprosy, 1; lymphangitis, 1; malarial fevers, 4; meningitis, 1; nephritis, 4; organic diseases of heart, 5; puerperal eclampsia, 1; pulmonary tuberculosis, 12; rheumatism, 1; senile debility, 3; stillborn, 2; syphilis, 1; tetanus neonatorum, 1; uræmia, 1; other causes, 21.

BRITISH HONDURAS.

Report from Belize, fruit port.

Acting Assistant Surgeon Carson reports as follows: Week ended August 30, 1903. Present officially estimated population, 8,500; number of deaths, 5; prevailing disease, mild type of malarial fever; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.

CHINA.

Plague at Inkow.

The SECRETARY OF THE TREASURY.

SIR: I have the honor to advise you that this Department is in receipt of the following telegram:

INKOW, September 7, 1903.

SECRETARY OF STATE, Washington:

Plague.

MILLER.

It is presumed this is from Mr. Henry B. Miller, consul of the United States at Niuchwang, China.

I have the honor to be, sir, your obedient servant,

ALVEY A. ADEE,
Acting Secretary.

Report from Hongkong—Plague.

Passed Assistant Surgeon McMullen reports, August 6, as follows:

During the week ended August 1, 1903, 14 vessels, with 1,107 crew and 650 passengers (294 cabin and 356 steerage), were inspected and granted bills of health; 893 crew and 329 steerage were bathed, and 1,239 pieces baggage disinfected.

Only 10 cases of plague, 5 in the city of Victoria and 5 in adjacent districts, were reported for the week, with 6 deaths. Of this number, 6 were Chinese, 2 Indians, and 1 each European and Filipino. Total number of plague cases to date from January 1 is 1,381.

COLOMBIA.

Report from Bocas del Toro, fruit port—Smallpox situation improving.

Acting Assistant Surgeon Osterhout reports as follows: Week ended September 1, 1903. Present officially estimated population not obtainable. Two cases of smallpox during the week; no deaths; number of

deaths from other causes, 5; prevailing diseases, smallpox and malarial fever. General sanitary condition of this port and the surrounding country during the week, not good. The smallpox situation seems to be well handled and has decidedly improved. Malarial fever has very much increased, but not more so than is usual for this time of the year.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Aug. 26	Lillie	24	0	0	0
26	Fort Gaines	23	0	0	0
28	Mount Vernon	20	0	0	0
30	Colombia	18	0	0	0

COSTA RICA.

Report from Limon, fruit port—Yellow fever.

Acting Assistant Surgeon Gruver reports as follows: Week ended September 3, 1903. Estimated population, 4,000; 1 case of yellow fever—deaths, 2; number of deaths from other causes, 4; prevailing diseases, yellow fever and malarial diseases.

General sanitary condition of this port and the surrounding country during the week, very poor.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.
Aug. 28	Olympia	36	0	0	0
29	Venus	27	0	0	0
31	Valencia	45	4	3	0
Sept. 1	Bound Brook	32	4	0	0
3	Appomattox	45	0	0	0

Smallpox on steamship Altai from Savanilla for New York.

PORT LIMON, September 12, 1903.

WYMAN, Washington:

There has been a case of smallpox, Squires, September 9, one of steerage passengers steamer *Altai* from Savanilla September 5. Steamer expected to arrive at New York September 14.

GRUVER.

CUBA.

Pernicious malarial fever at Daiquiri.

The following is received from Minister Squiers, at Habana, under date of September 5, 1903: I have consulted with Dr. Finlay, who informs me that between January 1 and July 31 there were 78 cases

of hæmaturic fever in the hospital at Daiquiri, Province of Santiago, and that none were fatal in January, 1 in February, none in March, 1 in April, none in June, 3 in July. Since then there has been only 1 death. Habana Health Report for August will show 472 deaths as compared with 533 in 1902.

NOTE.—Blackwater fever was reported, July 30, as prevalent in Costa Rica. (See Public Health Reports, Aug. 14, 1903, p. 1351.)

Severe forms of malarial disease in Daiquiri.

[Cablegram.]

HABANA, CUBA.

(Received in Washington September 8, 1903.)

WYMAN, Washington:

Guiteras reports no yellow fever nor epidemic disease, Daiquiri nor Santiago. Daiquiri has severe malaria; 38 black water since January, 6 fatal. August only two. Both cured.

FINLAY.

Hematuria or hemoglobinuric fever (malaria).

The following is received from Acting Assistant Surgeon Wilson at Santiago, under date of September 5:

This fever attacks persons who have suffered from several attacks of intermittent malarial fever.

Symptoms.—It commences with very heavy chills, which last from fifteen to twenty minutes, high fever of 40° , urine colored with hemoglobin, then changing to the color of black blood. In many cases the first symptom is the hematuria, pain in all the joints, anxiety. At the end of six hours, or before in some cases, the patient begins vomiting, at first slightly bilious, later, at the end of twelve hours, changing to the color of apiol. The vomiting becomes very difficult to control, persisting, in very serious cases, for four days after the cessation of the fever.

About six hours from the commencement of the attack the patient begins to assume a yellow color, more or less pronounced, in proportion to the gravity of the attack, always, however, being more pronounced than that of the yellow fever.

The urine presents a great quantity of hemoglobin and when treated with heat and nitric acid precipitates a large quantity of albumin.

The breathing becomes very labored, affecting all the thoracic and abdominal muscles. The hiccup is very frequent.

The pulse is low, not in proportion to the temperature. The spleen grows one-third larger than its usual size; the liver becomes painful to pressure; complete stoppage of the urine in fatal cases.

Cases that are not treated during the first twelve hours are always fatal.

A microscopic analysis of the blood reveals the micro-organisms of malaria.

Case No. 1.—A. F.; native of Spain; age 33 years; white; single. Entered the hospital on the 6th of July, 1903. Temperature 41° , pulse 160, respiration 46, albumin in the urine when treated with heat and nitric acid, presenting a large quantity of hemoglobin, showing a dark red color and leaving a large quantity of sediment in the stool; bilious;

vomiting; apiol color; unable to retain anything on stomach; stoppage of the urine; great enlargement of the spleen; liver enlarged and very painful to pressure.

Antecedents: Has been suffering frequent attacks of malaria, which he treated with *Vino Tónico* de Wintersmith. On the 4th he noticed that his urine presented a reddish color, which he believed to be bile. On the 5th had another attack of fever, with increased coloration of the urine. He then took a double dose of the *Vino Tónico*. The actions of the bowels turned yellow. Early on the morning of the 6th had a severe chill, which lasted twenty minutes; severe headache; giddiness; vomiting, green in color; urine of a dark red color, almost black, the entire body turning a yellowish green. Entered hospital at 9 a. m.

Administered 150 centigrams of chlorhydrosulphate of quinine hypodermically; dose of Rivari's antiemetic; one drop of Fowler's solution every two hours. Temperature remained at 40° all day. At 10 p. m. administered 1 gram of quinine in the same manner, the temperature descending to 38°. On the morning of the 7th, temperature 36.8°; administered a third dose of chlorhydrosulphate of quinine, 1 gram, hypodermically; the vomiting increasing. At 11 a. m. had another chill; temperature 41°, pulse 160, respiration 38. At 12 m. the patient died.

Case No. 2.—Native of Spain; 24 years of age; white; single.

Antecedents: Has suffered frequent attacks of malaria. On the 5th had a feeling of great depression; at 7 a. m. had a very heavy chill; noticed that urine presented a reddish color. Entered hospital; temperature, 40°; pulse, 140; respiration, 26; no vomiting; liver torpid; spleen enlarged.

Administered 1 gram of chlorhydrosulphate of quinine hypodermically, temperature remaining the same throughout the day. At 2 p. m. temperature descended to 38°, remaining thus until 11 p. m. On the morning of the 6th temperature 36.4°; the entire body turned very yellow, as also the stools; urine presented no hemoglobin, but large amount of bile. Administered a purgative, two hours afterwards 150 centigrams of sulphate of quinine internally. At 2 p. m. temperature rose to 38°; urine normal. On the morning of the 7th temperature 36.8°; administered 1 gram of quinine. Had a good appetite, and continued improving until the 10th, when discharged cured.

This class of fever is becoming more frequent, affecting the natives as well as those from foreign countries. Have never seen it attack strong persons or those who have not had malaria previously.

Order relative to treatment of passengers coming from ports infected with yellow fever.

Assistant Surgeon Trotter, at Habana, forwards the following under date of September 2, 1903:

[Translation.]

Republic of Cuba—Department of Government—Superior sanitary board.

Notice to passengers.

To the end that the existing sanitary regulations relative to certificates of immunity to yellow fever may not, for any motive whatever, be violated through deceit or fraud, the superior sanitary board of the island of Cuba have decided to issue the

following mandate to the employees of the quarantine service and those persons who make voyages of necessity:

ARTICLE 1. During the quarantine season no passenger or member of crew can disembark from vessels coming from infected ports or those considered suspicious in the Gulf of Mexico or any other port where yellow fever is known to exist, until after five days have passed since the sailing from the last port, if the vessel pertains to the class (considered) "not infected;" or five days from the time of its arrival in Cuba, if the vessel be considered "infected."

ART. 2. The exceptions to this will be only those individuals who have been inscribed as immunes to yellow fever in the office of the sanitary department of Habana, and have been previously identified.

ART. 3. Those persons, who, in the judgment of the quarantine officer, are immunes to yellow fever, will also be exempt from quarantine detention.

ART. 4. The medical officers of the maritime quarantine service who order the release of any person in quarantine, will remit a communication to the sanitary department of Habana, giving the data and reasons for such action, to the end that the individual may be inscribed in the register of immunes.

ART. 5. Those persons who violate these dispositions will be considered as infractors of the sanitary laws.

Habana, August 27, 1903.

By order of the chief sanitary officer.

E. B. BARNET, *Secretary.*

Report from Cienfuegos—Inspection of vessels—Mortality statistics.

Acting Assistant Surgeon McMahon reports, September 3, as follows: During the week ended August 29, 1903, two bills of health were issued to vessels going to ports in the United States, both in good sanitary condition and no sickness on board.

Mortuary report for the week ended August 22, 1903.

Arterio-sclerosis	4
Tuberculosis	3
Paludism	2
Bronchitis	2
Other causes	16
Total	27

Mortuary report for the week ended August 29, 1903.

Tetanus	2
Tuberculosis	2
Other causes	6
Total	10

No quarantinable disease has entered this port during this week.

Report from Matanzas—Inspection of vessels—Mortality statistics—Partial disinfection of British steamship Rustington for varioloid.

Passed Assistant Surgeon Von Ezdorf reports, September 1 and 7, as follows: During the week ended August 29, 1903, four bills of health were issued to vessels prior to sailing for ports in the United States. No quarantinable disease was reported.

Prior to issuing a bill of health to the British steamship *Rustington*, on August 23, 1903, the fore-castle was sulphured for twenty-four hours and the floors were washed with a solution of bichloride of mercury.

The consular bill of health issued at St. Thomas stated that this vessel arrived from Philadelphia with one case of varioloid.

No mention was made that the forecastle had been disinfected, though under the heading "Sanitary condition of vessel" it was noted as "good."

According to the statement of the captain, the forecastle was disinfected by him under direction of the St. Thomas authorities and then held in quarantine fifteen days, as was also mentioned in the consular bill of health.

I examined the crew as to their protection from smallpox, and found two with no vaccination marks, though these stated that they had been vaccinated several times, but unsuccessfully.

Report for the week ended September 5, 1903: Four bills of health issued to vessels leaving this port for the United States.

No quarantinable disease was reported in this district.

Mortality statistics for the period from August 20 to 31, 1903, inclusive.

Causes of death.	Number.
Tuberculosis	8
Cancer of stomach	1
Cancer of uterus	1
Cerebral hemorrhage	2
Tetanus, infantile	1
Endocarditis, acute	1
Organic disease of the heart	1
Arterio-sclerosis	1
Broncho-pneumonia	2
Diarrhea and enteritis, under 2 years	4
Athrepsia	1
Diarrhea and enteritis, 2 years and over	3
Peritonitis, simple	1
Albuminuria and puerperal eclampsia	1
Spina bifida	1
Total	29

Annual rate of mortality, 20.04 per 1,000; estimated population, 48,000.

Report from Santiago—Mortality statistics—Dissolution of mosquito brigade.

Acting Assistant Surgeon Wilson reports, September 2, as follows: Week ended August 29, 1903. Bills of health issued to five vessels bound for the United States and Porto Rico.

No quarantinable disease has been reported.

Mortality statistics for the week ended August 29, 1903.

Causes of death.	Number.
Pernicious fever	2
Malarial fever	1
Malarial cachexia	1
Cerebral meningitis	2
Cerebral congestion	1
Tetanus, infantile	1
Organic heart disease	1
Arterio-sclerosis	1
Athrepsia	1
Intestinal occlusion	1
Alcoholic cirrhosis of liver	1
Puerperal fever	1
Persistence of foramen ovale	1
Total	15

Annual rate of mortality for the week, 18.1 per 1,000; estimated population, 43,000.

The mosquito brigade has been dissolved on account of lack of funds. The new disinfecting vessel, the *San Rafael*, has arrived and is being made ready for work.

ECUADOR.

Quarantine against certain ports in Chile and Peru on account of plague.

The consul-general at Guayaquil reports, under date of August 15, 1903, that ports of Ecuador have been closed against Valparaiso and Iquique in Chile and Pacasmayo and Mollendo in Peru.

FRANCE.

Plague at Marseille.

[Cablegram.]

MARSEILLE, September 13, 1903.

SECRETARY OF STATE, Washington:

Nine cases, 1 death, pneumonia. Suspect now officially declared bubonic plague. Isolation complete. No extension past week. Health city excellent.

MORGAN, Vice-Consul.

GERMANY.

Report from Berlin—Plague and cholera in various countries.

Consul-General Mason reports, August 28, as follows:

Plague.

Egypt.—Between the 8th and the 14th of August there were registered in the whole of Egypt 10 cases of plague (and 8 deaths), viz, in Alexandria 8 cases (6 deaths) and in Damiette 2 cases (2 deaths).

British India.—During the week ended July 25 there were registered in the Bombay Presidency 2,715 plague cases (and 1,897 deaths), of which 87 cases (74 deaths) occurred in the city of Bombay. According to this, the plague appears to have steadily increased in the Presidency since the middle of June, while during the five weeks between the 14th of June and the 18th of July the weekly average amounted to 1,710 cases and 1,220 deaths.

Hongkong.—During the period from the 28th of June to the 11th of July there were registered in Hongkong 58 plague cases (with 47 deaths).

Mauritius.—During the period from the 5th of June to the 2d of July there occurred on the island 5 cases of plague and 5 deaths.

British South Africa.—Cape Colony: Between the 19th and 25th of July, 1 case of plague occurred in East London. Plague rats continue to be found in Queenstown.

New Caledonia.—According to a report dated August 13, 26 fresh cases of plague have occurred in the north of New Caledonia, of which 18 had a fatal termination.

Plague and cholera.

British India.—In Calcutta, during the period between the 12th and 18th of July, 8 persons died of plague and 24 persons died of cholera.

Cholera.

Turkey.—In the city of Damascus, between the 1st and 9th of August, there were registered 44 cases of cholera (with 28 deaths).

Death rate of Berlin.

The death rate of Berlin for the week ended August 15 was higher than it has been since the beginning of June last year, amounting, calculated upon the year, to 18.3 per thousand of the population, thus being considerably higher than the rate for the corresponding week of last year, in which it amounted to 14 per thousand. In spite of this rise, however, almost two-thirds of the large German cities showed less favorable figures than Berlin, the death rate of the following towns being considerably higher than that of this city, namely, Stuttgart, Dresden, Karlsruhe, Nürnberg, Magdeburg, Breslau, Königsberg, Stettin, Leipzig, Brunswick, and Cologne, while, on the other hand, the following cities had lower rates, viz: Hamburg, Munich, Frankfort-on-the-Main, Bremen, Hanover, Charlottenburg (with 17.4), Schöneberg (with 9.7), as well as London, Paris, and Vienna. The increase in the number of deaths was mainly among children in the first year of life, although there was also a notable increase among the higher age classes. The mortality rate among infants rose from 7.2 in the foregoing week to 8.5 per year and mille, being thereby one-half the rate of Stettin and Danzig, but higher than in Munich and Hamburg. Acute diseases of the respiratory organs again showed an increase, causing, during this week, 41 deaths. Acute intestinal diseases also showed an increase, claiming 207 victims. Eighty persons died of cholera and 75 persons succumbed to phthisis pulmonalis. There were also registered 51 deaths from cancer, 2 deaths from diphtheria, 2 deaths from scarlet fever, and 1 death from measles. There also occurred 3 deaths from enteric fever, and 19 persons died by violence.

GUATEMALA.

Report from Livingston, fruit port.

Acting Assistant Surgeon Peters reports as follows: Week ended August 31, 1903. Present officially estimated population, 3,500; no deaths; prevailing diseases, malarial; general sanitary condition of this port and the surrounding country during the week, good.

Bills of health were issued to the following-named vessels:

Date.	Name of vessel.	Number of crew.	Number of passengers from this port.	Number of passengers in transit.	Pieces of baggage disinfected.

JAPAN.

Report from Yokohama—Plague, cholera and dysentery—Plague on Russian war vessel Otvazny at Nagasaki.

Assistant Surgeon Moore reports, August 14 and 21, as follows: During the week ended August 8, 1903, 7 vessels, having a total personnel of 687 crew and 563 passengers, were inspected, 118 steerage passengers were bathed, and 190 pieces of baggage were disinfected. During this period no new cases of plague seem to have developed in Yokohama or elsewhere in Japan (excluding Formosa), though the usual official statement has not yet been received. Cases of cholera and cholera continue to be reported from several districts in southern Japan. No cases of true cholera have recently been reported in this vicinity.

Week ended August 15, 1903, 4 vessels having an aggregate personnel of 337 crew and 621 passengers were inspected, 180 steerage passengers and 2 crew were bathed, and 248 pieces of baggage were disinfected.

The report of infectious diseases in this city for the week ended August 8 includes the following: Enteric fever, 8 cases, 2 deaths; diphtheria, 1 case, 1 death; dysentery, 17 cases, 1 death. Similarly for the week ended August 15: Enteric fever, 1 case, 1 death; plague, 1 case, 1 death (reported as doubtful); dysentery, 17 cases, 4 deaths. It will be observed that the plague situation is quiescent and that dysentery is a rather prevalent infection.

Cholera is reported to have broken out on board the Russian war vessel *Otvazny* at Nagasaki. Two genuine cases of the disease (1 fatal) and several suspicious cases have already occurred on that ship, which arrived at Nagasaki from Shanghai on August 18.

PHILIPPINE ISLANDS.

Report from Manila—Cholera, plague, and smallpox in Manila—Cholera in the provinces.

Assistant Surgeon Heiser, chief quarantine officer for the Philippine Islands, reports, July 30, as follows:

During the week ended July 25, 1903, cholera, smallpox, and plague were reported in Manila as follows: Cholera, 8 cases, 7 deaths; smallpox, 1 case, no deaths; plague, 4 cases, 4 deaths.

During the weeks ended July 25 and August 1, 1903, respectively, there were no quarantine transactions at Manila.

Week ended August 1, 1903: Cholera, 7 cases, 7 deaths; smallpox, 1 case, no deaths; plague, 2 cases, 2 deaths.

Report of cholera occurring in provincial towns in the Philippine Islands for the week ended July 25, 1903.

PORTO RICO.

Inspection of immigrants at San Juan and subports.

Assistant Surgeon King, chief quarantine officer for Porto Rico, reports, September 8, as follows:

Report of alien passengers arriving at San Juan during the week ended September 5, 1903.

Date of arrival.	Name of vessel.	Where from.	Number of immigrants.
Sept. 2	French steamship Ferdinand de Lesseps.	Havre, Bordeaux, St. Thomas.....	4
4	German steamship Valdivia	Hamburg, St. Thomas.....	10
	Total	14

Report of alien passengers arriving during the week ended September 5, 1903, at the six subports of Porto Rico.

Date of arrival.	Name of vessel.	Where from.	Number of immigrants.
	MAYAGUEZ.		
Sept. 3	French steamship St. Domingue	Fort de France, Pointe a Pitre, Basse Terre, St. Thomas.	2

At the subports of Arecibo, Humacao, Aguadilla, Arroyo, and Fajardo, Porto Rico, there were no transactions.

Foreign and insular statistical reports of countries and cities—Yearly and monthly.

BAHAMAS—Dunmore Town.—Two weeks ended August 28, 1903. Estimated population, 1,232. No deaths. No contagious diseases.

Governors Harbor.—Two weeks ended August 31, 1903. Estimated population, 1,500. No deaths. No contagious diseases.

Green Turtle Cay—Abaco.—Two weeks ended August 31, 1903. Estimated population, 3,314. No deaths and no contagious diseases.

Nassau.—Two weeks ended September 1, 1903. Estimated population, 12,535. Number of deaths not reported. No contagious diseases reported.

FRANCE—St. Etienne.—Two weeks ended July 30, 1903. Estimated population, 146,671. Total number of deaths, 98, including diphtheria 1, scarlet fever 1, and 15 from tuberculosis.

Two weeks ended August 15, 1903. Estimated population, 146,671. Total number of deaths, 124, including diphtheria 1, enteric fever 4, measles 1, and 14 from tuberculosis.

GREAT BRITAIN—England and Wales.—The deaths registered in 76 great towns in England and Wales during the week ended August 22, 1903, correspond to an annual rate of 15.7 per 1,000 of the aggregate population, which is estimated at 15,075,011.

London.—One thousand two hundred and seventy-two deaths were registered during the week, including measles 22, scarlet fever 4, diphtheria 8, whooping cough 8, enteric fever 8, and diarrhea 184. The deaths from all causes correspond to an annual rate of 14.4 per 1,000. In Greater London 1,723 deaths were registered. In the "outer ring" the deaths included 2 from diphtheria, 2 from measles, 1 from scarlet fever, and 1 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended August 22, 1903, in the 21 principal town districts of Ireland was 19.2 per 1,000 of the population, which is estimated at 1,093,289. The lowest rate was recorded in Dundalk, viz, 4 and the highest in Kilkenny, viz, 49.1 per 1,000. In Dublin and suburbs 169 deaths were registered, including diphtheria 1, whooping cough 1, and 35 from tuberculosis.

Scotland.—The deaths registered in 8 principal towns during the week ended August 22, 1903, correspond to an annual rate of 15.1 per 1,000 of the population, which is estimated at 1,702,912. The lowest rate of mortality was recorded in Greenock, viz, 12.8, and the highest in Dundee, viz, 17.2 per 1,000. The aggregate number of deaths registered from all causes was 493, including diphtheria 6, measles 6, smallpox 1, and 9 from whooping cough.

JAMAICA.—*Port Antonio.*—Week ended August 1, 1903. Estimate population, not reported. No deaths and no contagious diseases reported.

Week ended August 29, 1903. Total number of deaths, 2. No contagious diseases reported.

MALTA.—Two weeks ended August 15, 1903. Estimated population, 193,315. Total number of deaths, 190, including 3 from diphtheria.

PORTO RICO.—Month of June, 1903. Estimated population, 953,243. Total number of deaths, 1,875, including diphtheria 1, enteric fever 15, and 108 from tuberculosis.

RUSSIA.—*Riga.*—Month of June, 1903. Estimated population, 300,000. Total number of deaths, 735, including diphtheria 6, enteric fever 5, measles 17, scarlet fever 10, whooping cough 6, smallpox 13, and 50 from phthisis pulmonalis.

SPAIN.—*Barcelona.*—Two weeks ended August 15, 1903. Estimated population, 600,000. Total number of deaths not reported. Nine deaths from enteric fever and 7 from smallpox reported.

WEST INDIES.—*St. Thomas.*—Two weeks ended July 17, 1903. Estimated population, 11,012. Total number of deaths, 12. No contagious diseases.

Four weeks ended August 21, 1903. Total number of deaths, 18. No deaths from contagious diseases reported.

Cholera, yellow fever, plague, and smallpox, June 27, 1903, to September 18, 1903.

[Reports received by the Surgeon-General Public Health and Marine-Hospital Service from United States consuls through the Department of State and from other sources.]

[For reports received from December 27, 1902, to June 26, 1903, see PUBLIC HEALTH REPORTS for June 26, 1903.]
